

Have a go at adding and subtracting these fractions. Start from green and work up.

If you want a real challenge, have a go at the challenge section!

Don't forget to look at the symbols!

1. $\frac{2}{7} + \frac{1}{7} =$

2. $\frac{3}{5} + \frac{1}{5} =$

3. $\frac{1}{4} + \frac{1}{4} =$

4. $\frac{3}{10} + \frac{2}{10} =$

5. $\frac{2}{5} + \frac{1}{5} =$

6. $\frac{2}{5} - \frac{1}{5} =$

7. $\frac{3}{6} - \frac{2}{6} =$

Remember when you add or subtract a fraction, you only and the numerator (the number at the top) and the denominator (the number at the bottom) stays the same!

1. $\frac{4}{10} + \frac{5}{10} =$

2. $\frac{6}{20} + \frac{7}{20} =$

3. $\frac{5}{15} - \frac{3}{15} =$

4. $\frac{6}{15} - \frac{2}{15} =$

5. $\frac{2}{4} + \frac{2}{4} =$

6. $\frac{1}{5} + \frac{4}{5} =$

Another tip! Remember $\frac{2}{2}$, $\frac{3}{3}$ and $\frac{4}{4}$ are all equal to 1 whole. This means if you are adding $\frac{1}{5} + \frac{4}{5}$ then it equals $\frac{5}{5}$ which is the same as 1.

1. $\frac{4}{5} + \frac{2}{5} =$

2. $\frac{5}{5} + \frac{2}{5} =$

3. $\frac{1}{7} + \frac{6}{7} =$

4. $\frac{7}{10} - \frac{2}{10} =$

5. $\frac{10}{10} - \frac{8}{10}$

Challenge!!

1. $1 \frac{1}{5} - \frac{3}{5} =$

2. $\frac{12}{15} - \frac{6}{15} =$

3. $\frac{15}{20} + \frac{6}{20} =$

4. $1 \frac{2}{5} + \frac{3}{5} =$

5. $1 - \frac{2}{5} =$

If you add $\frac{1}{5}$ to $2 \frac{3}{5}$ - what will you have?
